

FALSE TWIST TEXTURING APPARATUS**ABSTRACT OF THE DISCLOSURE**

5 A false twist texturing apparatus for false
twist texturing a plurality of synthetic yarns in a
plurality of processing stations, which each comprise a
plurality of feed roll systems, a primary heater, a
cooling device, a false twist unit, a secondary heater,
10 and a takeup device. For accommodating the takeup
devices, a takeup module is provided, and a processing
module is provided for accommodating the false twist
units, with a doffing aisle being formed along the
takeup module and a servicing aisle along the
15 processing module. To realize a short yarn path, the
processing module and the takeup module are joined to
form a frame section arranged between the servicing
aisle and the doffing aisle. In this arrangement, the
yarn passage from the processing module to the takeup
20 module is formed by the secondary heater which is
horizontally oriented, so that the yarn is guided
between the false twist unit and the takeup device on
the frame section along a generally U-shaped path.
